

Wetlands (National Wetland Inventory)

Riparian Corridors (NWI)

Vernal Pools (There's a recent update to the older Robert Holland Vernal Pool complex dataset).

Oak Woodlands (FRAP Multi-Source Land cover).

California Natural Diversity Database (point locations, with a buffer or polygons). This is a difficult dataset conceptually.

Critical Habitats (USFWS)

Species Hotspots

Habitat Connectivity (I'll see what the current best is since they're being worked on actively now, for this one and the one above)

Floodplains (FEMA, hopefully the locally updated versions)

Steep Slopes (USGS)

Prime, Statewide Agricultural lands (Or maybe the work that the AFT did for Fresno).
